cloudscale

The reliable classic: VPC with VMware Cloud Foundation

VMware Cloud Foundation (VCF) is the all-in-one industry standard for your software-defined data center, future-proofing your IT infrastructure. With seamless integration of vSphere, vSAN, NSX, and the vRealize Suite, VCF provides an automated and centralized platform for compute, storage, networking, and cloud management. What makes VCF unique? The ability to run traditional workloads and modern Kubernetes-based applications on the same platform—combined with automation tools that enable lifecycle management and updates in just a few clicks. Whether private, hybrid, or multi-cloud, VCF delivers consistent performance, maximum security thanks to microsegmentation, and unmatched flexibility for any IT strategy.

VCF is the easiest and most secure way to move to the private cloud.

The open source-based: cloudscale

cloudscale is the Swiss open source cloud that stands for maximum performance, data protection, and user-friendliness for true technologists. We focus on technologically advanced DevOps and development teams that don't want to compromise on technology. With CLI, CSI driver, and Cloud Controller Manager, we are perfectly positioned for your enterprise-grade Kubernetes environment and integrate seamlessly into your IaC environment. And on the solid basis of lightning-fast NVMe SSD storage, private networks between VMs, and a guaranteed SLA of 99.99% availability, we offer you and your team all the possibilities for cutting-edge DevOps setups.

cloudscale: The Swiss cloud for DevOps engineers and demanding software companies.

Egal ob VCF oder cloudscale. Das bieten Dir unsere Swiss Private Cloud Services immer:

- **Shared and dedicated clusters**
Use our flexible shared cloud offering in your private virtual data center or, if you prefer, let us build, install, configure, and operate your own hardware cluster. Together, we will put together exactly the hardware that is perfectly tailored to your application. Decide for yourself on GPUs, memory types, cluster size, firewalls, and much more.
- All data center locations in Switzerland
As a cloud provider based in Zurich, we operate our cloud locations in Switzerland, thus creating clear legal relationships and enabling geo-redundant setups.
- ISAE reports available
We cover outsourced processes in our own reporting thanks to ISAE. As a customer, you get access to the report for your compliance.
- Multiple storage tiers
Offer each of your applications the right storage tier and optimize your performance and TCO.
- On-demand resource scaling
Flexibly adapt your cloud resources to the current needs of your project in no time at all – within seconds, around the clock.
- DDoS protection
Stay online even under difficult conditions. We scrub your traffic and protect you in case of an emergency.
- Support from Switzerland by engineers
Get quick access to highly competent technical support from our Swiss engineering team at any time.
- No call centers. No long waiting times. We help you exactly when you need us and in your language.

Try cloudscale today.

Launch your Linux cloud servers in seconds with self-service. Use the web-based control panel or our integrations with popular DevOps tools.

Try VCF free for 90 days.

Our experienced engineers are here to help. Test the performance of your applications—completely free of charge and with no obligations.

- IP Dual Stack
Get both static IPv4 and IPv6 addresses for each server.
- Bring your own IP
Alternatively, bring your own ranges. On request, we can route your IP address range to your VDC.
- Bring your own IDP
Make your employees' daily work easier and increase security at the same time by connecting your existing identity provider (IDP) to our Cloud Control Panel.
- Private Cloud Connect
Connect your hardware appliances and dedicated physical machines directly to your cloud environment without data traffic over the internet, making it easy to build secure hybrid and multi-cloud setups.
