Cyberlink
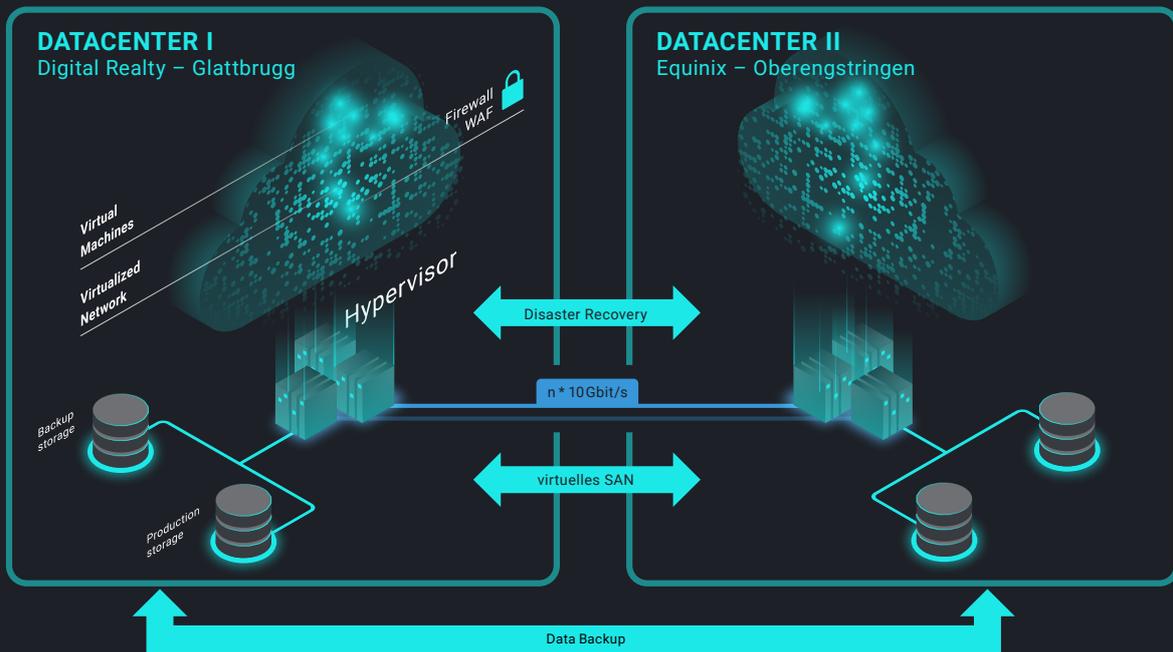

Cyberlink is your reliable partner for VMware-based cloud services in Switzerland. Our virtual private cloud offering provides infrastructure as a service with consistent quality, security, and flexibility. Whether you want to do away with your own hardware entirely or are looking for a disaster recovery solution, we would be happy to advise you personally on your journey to the cloud and work with you to find tailor-made solutions.

Cyberlink Virtual Private Cloud.
Cyberlink's Virtual Private Cloud (VPC) provides you with a completely software-based data center. This not only eliminates the need to purchase, manage, and maintain your own infrastructure, but also removes capacity limitations. Benefit from flexible growth opportunities and optimize the Virtual Private Cloud for your applications. Equip an unlimited number of virtual machines with computing power and disk space as needed. You pay for what you actually use and avoid unnecessary costs due to overcapacity. A management tool provides you with extensive self-service functions. Or take advantage of the expert support of our engineers for the design and operation of your Virtual Private Cloud.

Powered by VMware.
Cyberlink bases its cloud services on VMware. We were the first provider in Switzerland to be awarded the highest certification level, "VMware Cloud Verified." This certifies that Cyberlink's cloud architecture fully complies with the provider's hardware, software, and IT security requirements and

that our employees have the necessary certifications. Are you already familiar with and appreciate the VMware world? Then Cyberlink is the right place for you.

Free app marketplace from VMware.
We've all been there: you need an application, but don't have time to install and configure it. As one of the first VMware Cloud providers in Europe, we can offer our VPC customers the VMware app marketplace free of charge. VMware offers virtual machine templates with pre-installed and pre-configured applications. The app marketplace is natively integrated into our virtual private cloud platform. VPC customers can use these pre-configured VM templates free of charge; only the consumption fees for the VMs provided are billed.

Step by step toward the cloud—with our DRaaS solution (VMware Cloud Director Availability).
Are you convinced of the advantages of a cloud solution, but prefer a gradual outsourcing approach? Then we recommend setting up a disaster recovery site. With VMware Cloud Director Availability, you can easily copy and back up workloads from your on-premise VMware environment to the highly secure Cyberlink VPC infrastructure. This allows you to make significant progress in the area of business continuity with minimal effort. If you want to take the next step and run your active workloads on our cloud, this is no reason to abandon your own infrastructure. To get the most out of your investment, you can use your own servers as a disaster recovery site. Alternatively, this option is also available in a Cyberlink data center. Cyberlink is a validated VMware disaster recovery partner.

Increased efficiency thanks to automation.
Deploy applications with just one click or via a programming interface thanks to vApps. Firewall rules and functions such as load balancing can also be conveniently stored in templates. This completely eliminates tedious and repetitive setup tasks. The time required for deployment is reduced from weeks to seconds.

Key Facts.

> Data storage & operation in Switzerland

> Highest security & availability

> Certified quality – according to ISAE 3402

> State-of-the-art cloud architecture, powered by VMware

> Flexible scaling to meet your needs

> Usage-based billing

Dedicated Private Cloud.
Do you have specific requirements for your cloud infrastructure, such as GPU support, or are you unable to run your workloads on a shared environment due to licensing restrictions? We would be happy to design a private cloud solution for you on dedicated hardware that precisely meets your requirements. Combine the advantages of both approaches by connecting your dedicated environment to the Virtual Private Cloud.
